Education

University of Toronto Sep. 2021 – Apr. 2026

*Honours Bachelor of Science in **Computer Science** (Specialization in **Software Engineering**)*

- Teaching Assistant (Data Structures, Algorithms, and Object-Oriented Programming)

Relevant Coursework:

Operating Systems, Data Structures & Algorithms, Advanced Algorithms, Software Engineering, Databases, Graduate Machine Learning

Experience

Software Engineer Starting Dec 2026

DoorDash *Toronto, Canada*

- Incoming Backend Software Engineer in Product Engineering.

Software Engineer May 2026 - Nov 2026

Royal Bank of Canada *Toronto, Canada*

- Engineered an automated **Snowflake** to LeanIX data integration pipeline using **Python**, **Apache Airflow**, and **AWS S3**, replacing manual file transfers and Excel transformations to save **150+ hours annually**.
- Built an event-driven automation workflow using **Power Automate** and **webhooks** to automate application code generation, eliminating manual processing and saving **100+ hours annually**.
- Redesigned **CI/CD** pipelines and release workflows, introducing structured development, **UAT**, and production stages to improve deployment reliability and mitigate merge conflicts and environment-related risks.
- Led the migration of **16 Apache Airflow DAGs** across production infrastructure, coordinating dependencies and resolving deployment blockers ahead of legacy system decommissioning.

Software Engineer Intern May 2024 - August 2025

Royal Bank of Canada *Toronto, Canada*

- Designed and implemented a cloud-native validation pipeline using **Terraform** and **AWS**, prototyping automation workflows to accelerate safe third-party artifact adoption.
- Built an internal **AI-powered productivity prototype** using **Python**, **LangChain**, and **OpenAI** to generate concise Jira summaries, creating documentation and walkthroughs to help teams adopt AI workflows.
- Developed and wired CI/CD and ETL automation using **Apache Airflow**, **S3**, and scripting to streamline audit log ingestion and improve developer experience.

Software Engineer Intern Sept. 2023 - Dec. 2023

Treasury Board Secretariat *Toronto, Canada*

- Built interactive web prototypes using **React**, **TypeScript**, HTML, and CSS to validate UI workflows and improve UI/UX.
- Migrated backend to scalable **SQL APIs**, documenting architecture changes and collaborating with stakeholders to ensure smooth adoption.
- Implemented automated testing using **Jest**, creating clear validation workflows for ongoing feature delivery.

Projects

AI Voice Product Assistant | *n8n, Supabase, RAG, Vector Embeddings, ElevenLabs, Webhooks, LLMs*

- Built an end-to-end **RAG** pipeline using **n8n** and **Supabase**, transforming structured product data into vector embeddings and storing them in a vector database for semantic search and retrieval.
- Developed an event-driven retrieval workflow using **webhooks** and vector similarity search to dynamically retrieve relevant product context and augment **LLM** prompts with grounded data.
- Integrated the RAG pipeline with an **ElevenLabs conversational voice agent**, enabling real-time product Q&A through webhook-triggered retrieval and context-aware AI responses.

PassionPals Web Application | *MERN (MongoDB, Express.js, React.js, Node.js), Agile*

- Led Agile development of a **React/Node.js** full-stack platform, building prototypes and REST APIs to validate features.
- Developed a recommendation algorithm using user info to personalize feeds and show content-ranking workflows.

Technical Skills

Languages: Python, TypeScript, JavaScript, PowerShell, Go, Java, C++, Bash, HTML/CSS
Frameworks: React, Node.js, Express, Vite/Webpack, Flask, FastAPI, REST APIs
Cloud & DevOps: Azure, AWS, Docker, GitHub Actions, CI/CD YAML, Git, Jenkins
Data Science & ML Libraries: TensorFlow, PyTorch, Scikit-learn, LangChain, OpenCV, Pandas, NumPy, HuggingFace
